

TESSERA

A case opener where the odds are a fact you can recount.

One dollar buys a real Megaplot ticket. The case comes on top.

01 The promise

One dollar buys a real Megaplot lottery ticket. The case rides on top of it.

All three numbers under the hero are read from the chain, not written by us.

EVERY CASE = 1 REAL MEGAPLOT TICKET

A finite pool, drawn without replacement.

A case costs \$1 and buys you a real Megaplot lottery ticket, bought by Megaplot itself, in the transaction that opens the case. What is inside was shuffled before anyone opened one, and is drawn in order. A prize someone else takes is gone for everybody, until the deck runs out or its vault is taken, and the contract deals it again.

02 The decks

Six decks, each a finite pool cut once and drawn without replacement.

The payout rate on every card is arithmetic anyone can repeat from public events.

How the ticket, the pool

03 How a deck drained

The back of a card plots the pool against real block time.

An even slope and a batch opened in one minute look nothing alike, and that difference is the point.

THE LINE

It can only fall. The pool is drawn without replacement, so a card that leaves never comes back.

THE STEPS

Flat stretches are quiet days, cliffs are somebody opening a batch. Time is block time, not one pixel per open.

THE VAULT

\$1.50 is real money sitting in this deck, waiting for whoever draws the one slot that opens it.

04 One case, one action

Everything this deck holds, counted: 1 vault, 2 porphyry, 2 aureus, 30 TESA, 165 empty.

The page does not scroll. The item, the price, the multiplier and the whole drop table sit on one screen.

05 The wait is the proof

Inco covalidators take six to nine seconds to decrypt the slot.

The strip runs at a constant speed and promises nothing, because the time is not ours to promise.

06 The chain answers first

Only after the value arrives does the strip brake onto it.

Nine cases in ten add nothing on top of the ticket, and the game says so plainly.

+1 real ticket

THE CASE ADDED NOTHING ON TOP · MOST DO NOT

click anywhere to continue

Most cases add nothing on top of the ticket. That is the honest case.

07 Case battles

Two players, one card each, and the higher card takes both tickets.

The creator's card stays encrypted until an opponent has paid, so nobody can pick easy fights.

08 Anyone can cut a deck

Name it, colour it, choose the shape, and the contract shuffles it on chain.

The contract refuses any table that promises more than its own commission earns.

< ALL DECKS

Cut your own case

Anyone can. The contract shuffles the deck and nobody, not you and not us, can see or change what is inside, or re-deal it on a whim: it deals itself again only when it runs out or when its vault is taken. You take a share of the commission it earns; the dollar players pay still buys them a whole real ticket.
